                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       is used in the trans-ectivating factor inhibitor of the invention, that inhibits Tax dependent transcription. The inhibitors can be used to inhibit transcription of DNA, that codes for proteins that can be harmful to mammals, especially humans, e.g. to treat Viral infections (e.g. humosygous HTLV-I infections or hepatitis 8), genetic disorders (e.g. humosygous (saillai hyperchos or hepatitis 8), genetic disorders (e.g. humosygous fequence 13 A):
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       14

MTLV-I associated myelopsthy and adult T-cel lenkenis.

Example 1: Columns 11-12: 21pp; English

Example 1: Columns 11-12: 11pp; English

17(1356-74)75 are himsan T-cell lymphotropic virus type I (HTLV-I)

17(1356-74)75 are himsan T-cell lymphotropic virus type I (HTLV-I)

17(1356-74)75 are himsan T-cell lenkaemia, and HTLV-I, e.g. adult T-cell lenkaemia, and HTLV-I, sequence 20 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ll MAY-1998 (first entry)
Tax protein fragment, HTLV-1, human T-cell leukaemia vitus; hepatitis B;

                                                                                                                                                    Of C-protein coupled codorant receptor I7 N-terminal sequence.

Of C-protein coupled codorant receptor I7 N-terminal sequence.

No C-protein coupled codorant receptor I7 N-terminal sequence.

No C-protein coupled codorant receptor I7 N-terminal sequence.

No C-protein coupled receptor I9 N-terminal sequence.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      cultured to produce the protein. The alpha-glucuronidase protein is used to improve dough and baked products. The protein can also be used to treat callings for the protein can be considered by the consideration of the protein can be considered by the consideration of the glucuronic act and the greent in it, as a slashing added for and the greent products of the protein protein of the consideration of the protein increased by the protein increased blood valuation and fee conversion rate, particularly by Sequence 13 AA:

Reving identified and determined the sequences of interest, particular regions can be isolated from H. pylori by PCR amplification for recombinant polypeptide production. e.g. in E. coll hosts.

COMMENT COMMENT COMMENT o NMP molecules

Four types of regulatory chains are found: I sliphs, I bets, if shiphs, and II bets, their expression varies among tissues and is in some cases constitutive and in others inducible. Type II regulatory chains are phosphorylated by the attivated catalytic chain. The physiological significance of phosphorylations by other kineses is unclear catalogic by a completing proteins including chains are acceptable as a constitution of the phosphorylations of the mediate seminants association by binding to anothering proteins including chains accept the phosphorylations of the seminant special control of the binding and for district extraction.

chains and two catalytic chains. Activation by cANP produces two active catalytic monomers and a regulatory dimer that blands four CANP molecules.

The production of the catalytic monomers and a regulatory dimer that blands four the production of the catalytic chain. Their expression varies among tissues and in others inducible. Their exputatory chains are phosphorylated by the activated catalytic chain. The physiological significance of phosphorylations by other kinases is unclear. The physiology chains mediate membrane association by binding to anchoring proteins. Including the parts kinase. The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              egane gp8:TPA, AVED recreased the state of t                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Davies, S.S.P.; Krishnapiliai, V.V. submitted to the EMI Data Library, September 1990 DNA sequence analysis of the replication region of the Pseudomonas aeruginoss plasmid R91-5.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            S16681 * type complete

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Page 45
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             -1- SINITAN.

RP IDENTIFICATION OF PROBABLE FRAMESHIPTS.

RA CIBSON T.J.;

RI OMPOBLISHED OBSERVATIONS (MAR-1995).

CC --- CANALTIC ACTIVITY: ATP + D-GALACTOSE - ADP + D-GALACTOSE

CC --- PATRHAN: FIRST EXACTION OF GALACTOSE METABOLISM (LEIGH PATRHAY).

CC --- SANILARITY: TO OTHER PROAKANCYDIC AND EMARYOTIC GALACTONINASES.

C--- CAUTION: REF. 1 SEQUENCE DIFFESS FROM THAT SHOWN IN POSITIONS 49

CT TO 6.) 181 TO 244, AND 288 TO 310 DE TO FAMESHIPTS.

CC TO 6.5 181 TO 244, AND 288 TO 310 DE TO FAMESHIPTS.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               MENDEZ E., VINUELA E.;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                VINUELA E., RODRIGUEZ J.F.;
